Sequestration <sup>c</sup> . . . . .	0	1	8	7	11	8	7	7	7
<b>Number of Entities Reporting Commitments for Future Reductions . . . . .</b>									
<b>Total</b> . . . . .	<b>42</b>	<b>60</b>	<b>64</b>	<b>72</b>	<b>72</b>	<b>66</b>	<b>70</b>	<b>87</b>	<b>79</b>

<sup>a</sup>"Direct" emission reductions are reductions in releases of greenhouse gases "on site." For the purpose of completing Form EIA-1605, "on site" is defined as any source owned (wholly or in part) or leased by the reporting entity.

<sup>b</sup>"Indirect" emission reductions are reductions in emissions from sources not owned or leased by the reporting entity but that occur, wholly or in part, as a result of the entity's activities (for example, an automobile manufacturer's investment in increased automotive fuel economy can result in decreased emissions from vehicles owned by individuals or managed fleets).

<sup>c</sup>"Sequestration" is the fixation of atmospheric carbon dioxide in a carbon sink through biological or physical processes, such as photosynthesis.

<sup>d</sup>The short form does not allow reporters to distinguish among direct reductions, indirect reductions, and sequestration quantities.

<sup>e</sup>In a "basic reference case," actual emissions (or sequestration) are compared with an estimate of historical emissions (or sequestration) in a particular base year or average of years.

<sup>f</sup>In a "modified reference case," actual emissions (or sequestration) are compared to an estimate of what emissions (or sequestration) would have been in the absence of the project.

(R) = revised.

Notes: 2001 data have been revised upward to include 2001 reports that were submitted after the filing deadline. It is expected that the 2002 data will also be revised upward in next year's report with the inclusion of late 2002 reports. Totals for direct and indirect reductions may not equal sum of components due to independent rounding.
